

3P Tools For Bulk Downloading Highlights

Overview

This is a simple guide that explains how to download all videos from your channel; be it uploads, past broadcasts, or highlights.

Required Apps/Downloads

Twitch Downloader: <https://github.com/lay295/TwitchDownloader>

This is the tool we will use to bulk download videos from Twitch. It supports both a GUI (Graphical User Interface) and a CLI (Command Line Interface). This guide will focus on the GUI interface only available on Windows Users on Linux or Mac will have to use the CLI version, which is beyond the scope of this guide. To download this tool, go to the releases page and click on the link in the “Assets” section that applies for your computer. This guide assumes you will be downloading “TwitchDownloaderGUI-1.55.2-Windows-x64.zip.”

| ▼ Assets 10 | | |
|------------------------------------------------|---------|-----------|
| TwitchDownloaderCLI-1.55.2-Linux-x64.zip | 43.1 MB | last week |
| TwitchDownloaderCLI-1.55.2-LinuxAlpine-x64.zip | 44 MB | last week |
| TwitchDownloaderCLI-1.55.2-LinuxArm.zip | 40.9 MB | last week |
| TwitchDownloaderCLI-1.55.2-LinuxArm64.zip | 42.1 MB | last week |
| TwitchDownloaderCLI-1.55.2-MacOS-x64.zip | 46.4 MB | last week |
| TwitchDownloaderCLI-1.55.2-MacOSArm64.zip | 46 MB | last week |
| TwitchDownloaderCLI-1.55.2-Windows-x64.zip | 42.4 MB | last week |
| TwitchDownloaderGUI-1.55.2-Windows-x64.zip | 131 MB | last week |
| Source code (zip) | | last week |
| Source code (tar.gz) | | last week |

Commander Root’s Video Manager:

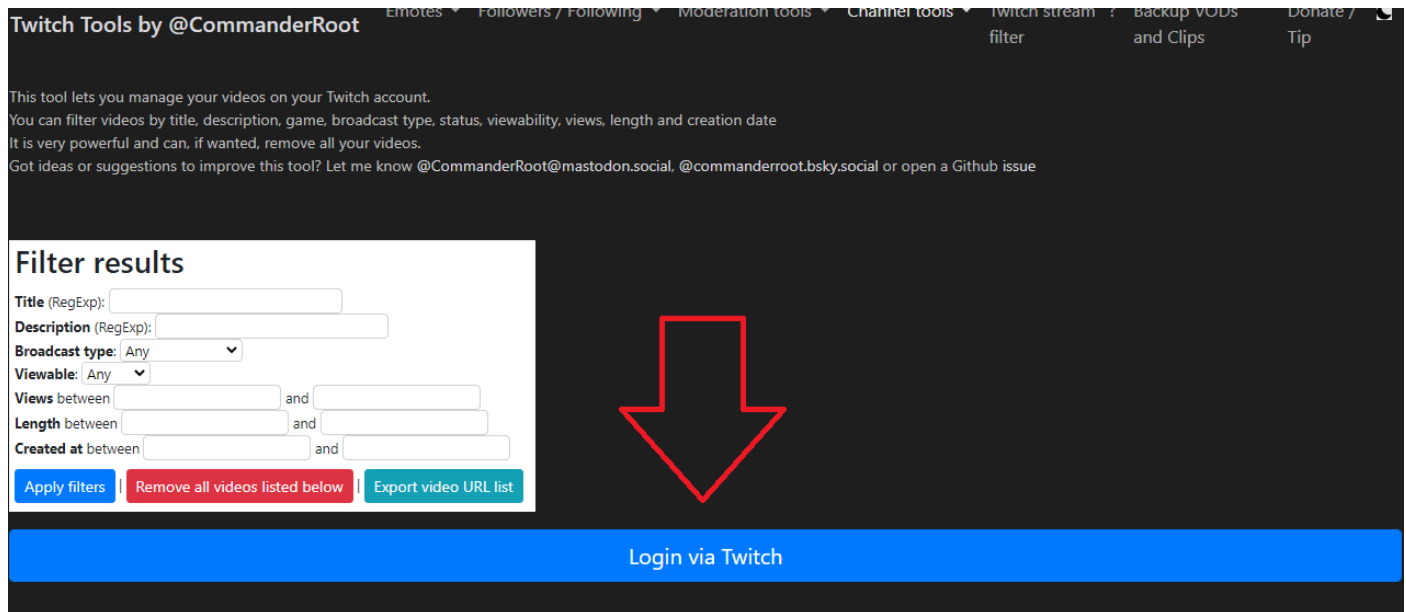

https://twitch-tools.rootonline.de/vod_manager.php

This is a web-based application used to pull the list of video URLs which can then be used by the Twitch Downloader application above.

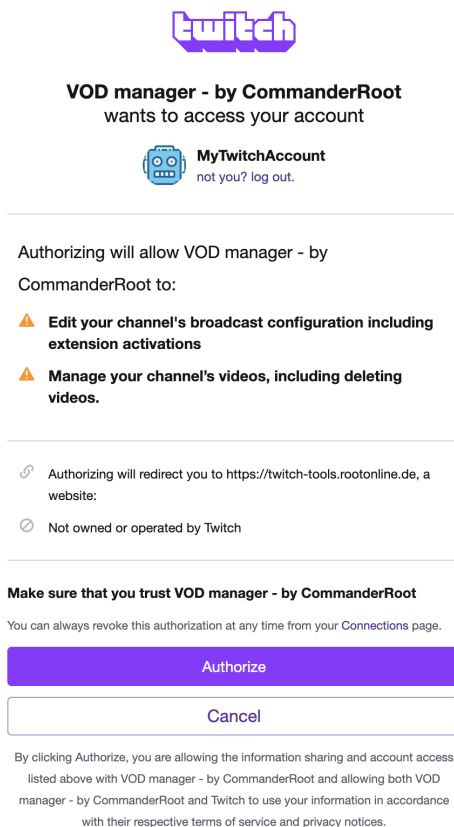

Step by Step Guide

1. Navigate to Commander Root’s [Video Manager](https://twitch-tools.rootonline.de/vod_manager.php)

2. Click the “Login via Twitch” button on the page

3. If this is your first time using the Video Manager, you will be shown an authorization page. Accept the authorization to continue.

4. You should now see a list of all videos from your channel. Click the broadcast type dropdown to select the type of video you would like to download. Your options are Any (All videos), Past Broadcasts, Uploads, and highlights. If you would like to only download videos affecting your quota, repeat this and the following step for “Uploads” and then “Highlights.”

Log:

Idle 0 %

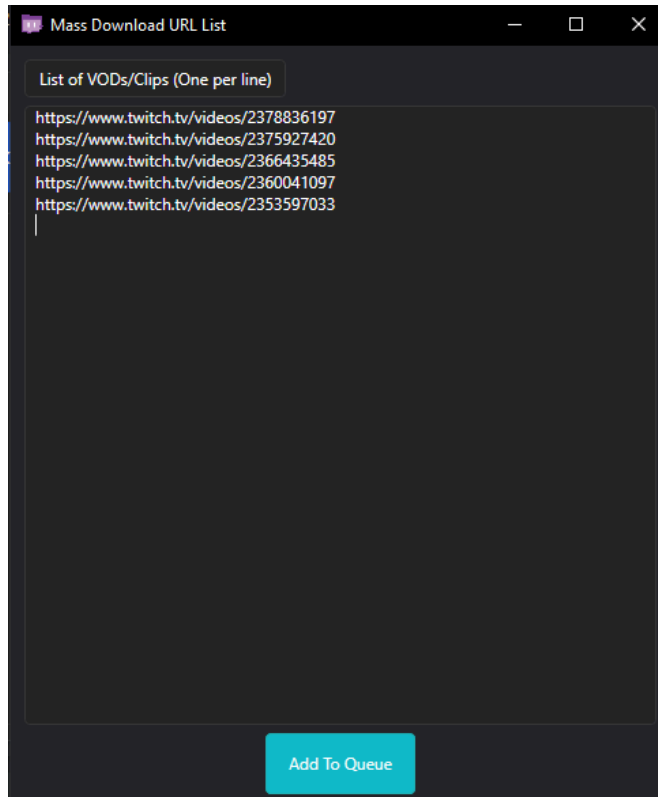

7. Click on the “Task Queue” button

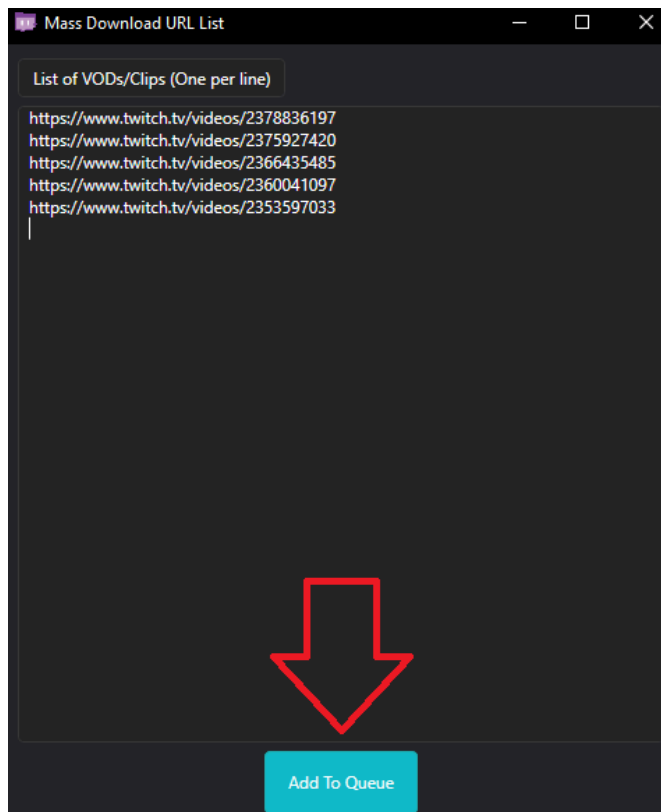

8. Click on the” URL List” button

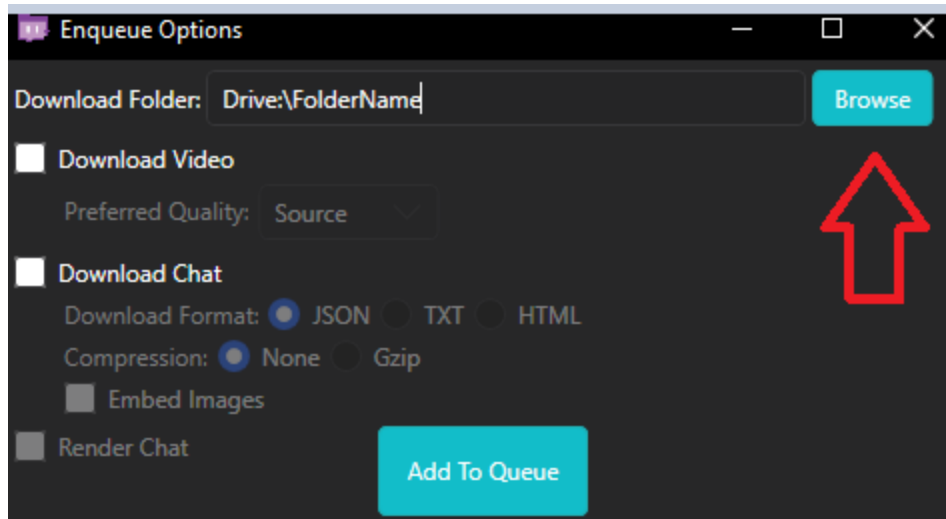

- Copy and paste the URLs from the video manager download(s) into the URL list

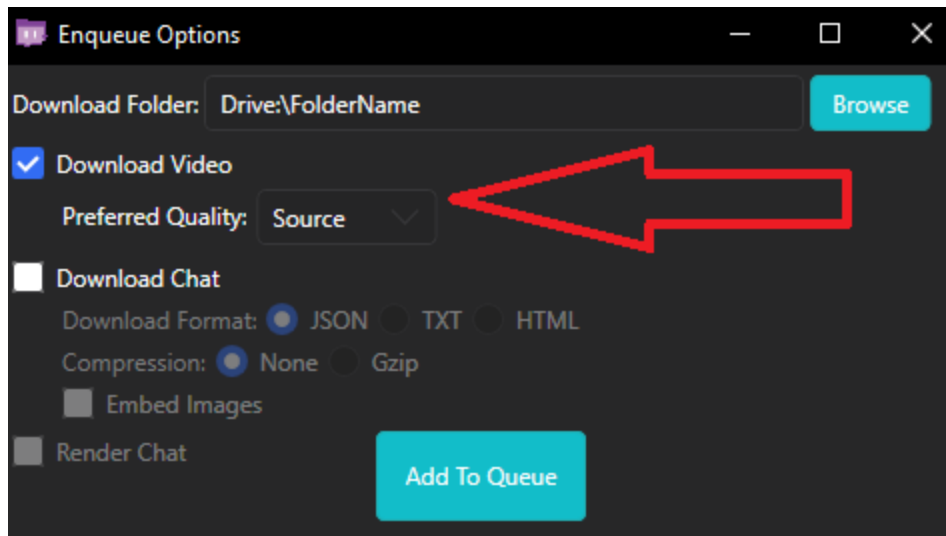

- Click the "Add To Queue" button

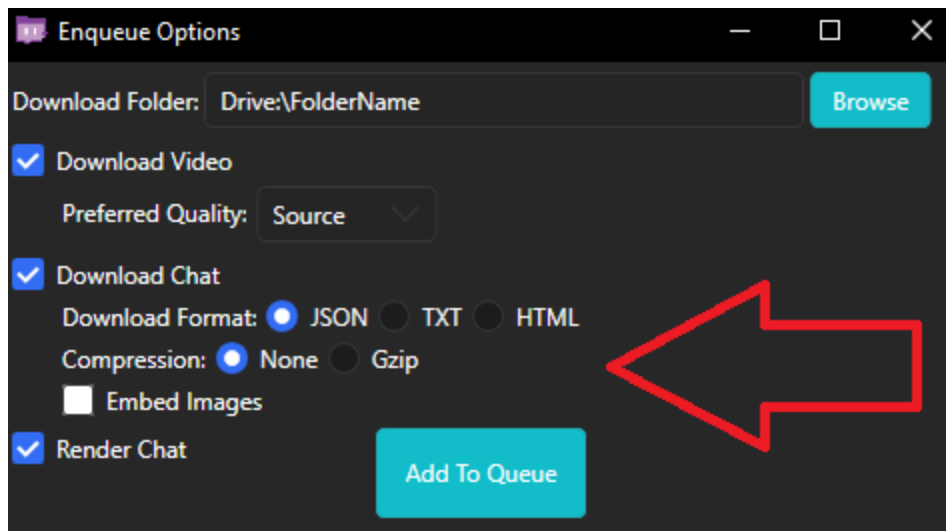

11. Select a folder to download your videos via the “Downloader Folder” option (either by typing in the location or by clicking the “Browse” button)

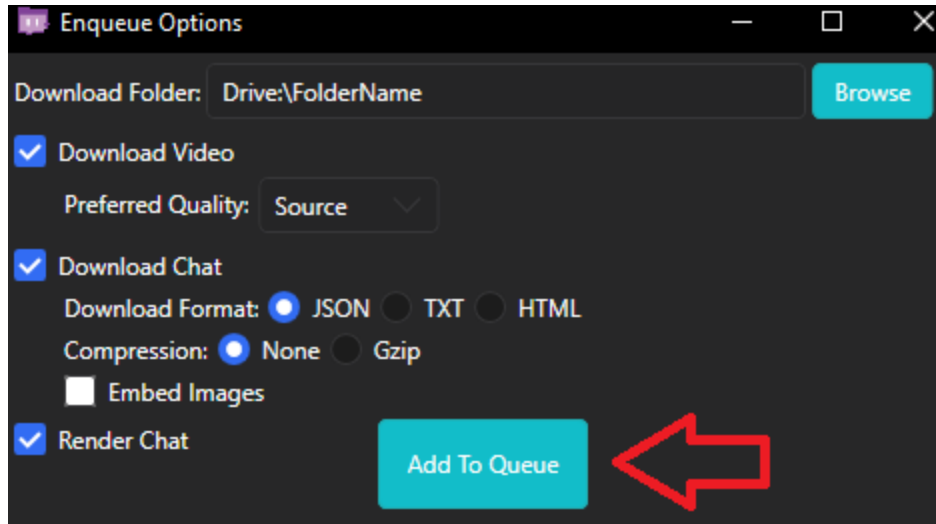

12. Check the “Download Video” box and select the quality level (Source is recommended)

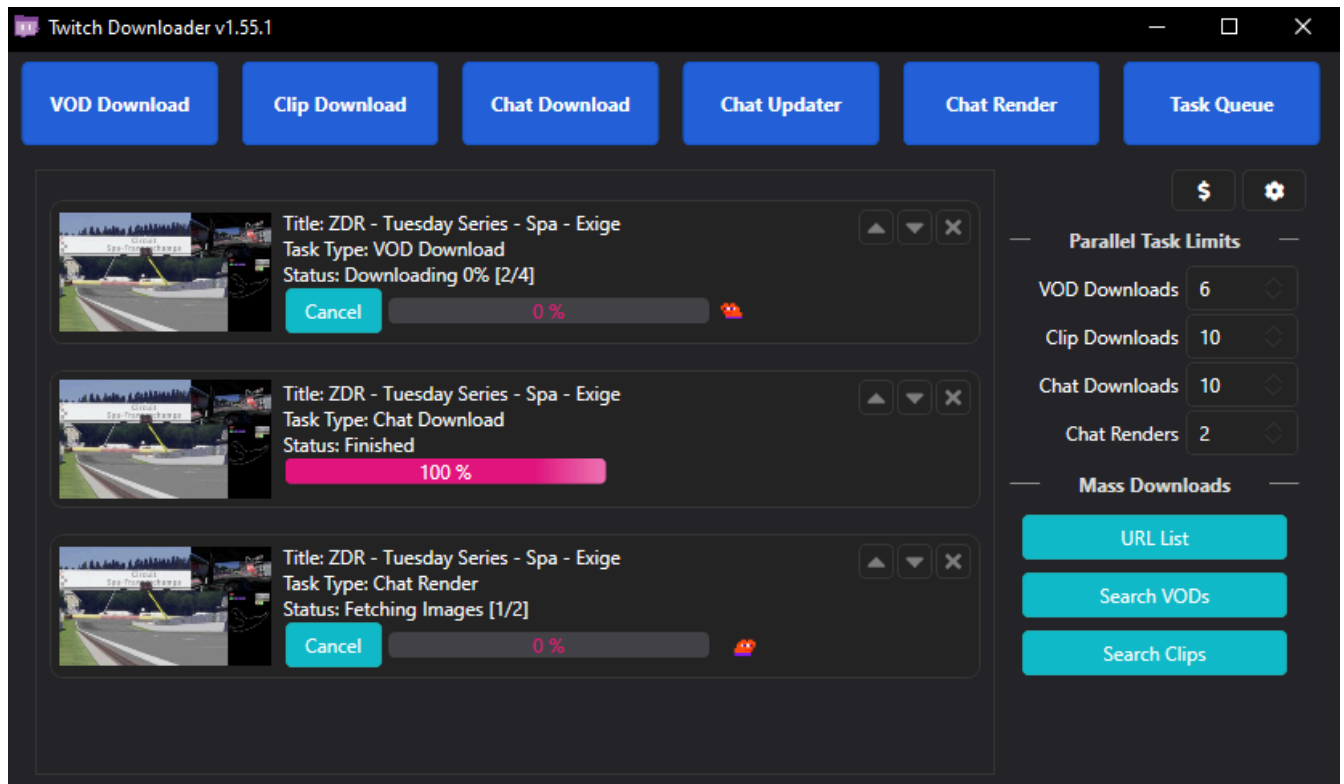

13. If you would like your chat logs from the video as well, click “Download Chat”. You can also click “Render Chat” if you would like the program to create a video of your chat automatically

14. Click “Add to Queue”

15. The manager will begin to download all video URLs entered. You will see multiple downloads per video if you selected more than one option (i.e. Download Chat and/or Render Chat)

16. Once the program finishes downloading, you will find all videos and files in the folder specified in step 11
